Research Experience

Database Management and Creation – I have worked with large administrative databases, criminal history databases, and social science databases. I created a comprehensive criminal history database that tracks the criminal case processing for all arrests in the state of Texas across a 13-year period. I also helped create and manage a national survey database, qualitative coding databases, and a sports statistics database.

Surveys – I have designed, conducted, and analyzed multiple surveys, both independently and in collaboration with a team of researchers.

Qualitative Interviews – I have conducted, coded, and analyzed interviews, both independently and in collaboration with a team of researchers. These interviews involved criminal justice actors, as well as at-risk populations of individuals on probation and in prisons.

Quantitative Methods Training and Experience

Multivariate regression models
Hierarchical Linear Models (HLM)
Difference in Difference (DiD) models
Fixed effects models
Instrumental Variable (IV) analysis
Mediation analysis
Survival analysis
Regression discontinuity
Propensity score matching
Logistic regression
Log-linear and association models
Latent class models
Finite mixture models
